

ReportPax Labels Questions: How can I make the first line bold of each label.

To apply separate formatting to individual lines of a label, you must split the table into multiple rows.

For example, the 30 Labels per page template contains only one row and you want the top line to be **bold**.

First add a row by right clicking the current row and click Insert Row

Below. You can then resize the rows to desired heights. Set the Can Grow property of the new row to False. The final step is to copy the formula in the Visible property to the new row.

Be sure to keep the total table height at 1 inch (for the 30 Labels per page template). Repeat the process for the other two tables.

Check out the 10 Labels per page template for a working example.
