

## *Reportpax Labels Questions: Do the Report Templates work in VS2008?*

Yes they do. In fact the [Demo Site](#) was upgraded to .Net 3.5 and Visual Studio 2008. Now you get to use the [Print icon](#)! In VS2005, the print icon would only be available if you were running the reports from a Reporting Services server. The work around was to export the report to pdf first, then print.

Other than that, there is not much new in the VS2008 ReportViewer control. Reports are backwards compatible. Below is a list of new Reporting features in VS2008 (from [Microsoft's site](#)):

- New Report Projects
- Report Wizard
- Expression Editor Enhancement
- ReportViewer Printing
- PDF Compression

It should be noted that the ReportViewer Control is only available in the Standard Version and above (before you go downloading the the Express editions).
