

Reporting Services Questions: What is the difference between .RDL and .RDLC files?

Well the .RDL files are for Reporting Services and the .RDLC files are for the VS.NET 2005 ReportViewer Component. The "C" in .RDLC simply stands for Client and that is the main difference. The .RDLC files do not store any query specific information (or in other words, how to get your data). This is the responsibility of the application you use your reports with.

However the two files share the same XML format and can be converted back and forth:
