

## *Reporting Services Questions: Why aren't multiple spaces appearing on my report?*

While I wouldn't recommend using spaces for formatting, if you have to they are supported in Microsoft Reporting. However multiple spaces will not appear in the HTML preview when designing a report (or exporting to HTML). The reason this happens is that HTML treats consecutive spaces as one space. HTML does have the non breaking space tag (&nbsp;) but it is not supported in HTML view of the reports. However, when you view the reports in ReportViewer or export to PDF, the extra spaces will appear.
