

ReportPax Labels Questions: Why are the labels repeating or why are some missing?

If you are getting erratic or unexplainable results after building your label report, the most likely cause is an incorrect Visibility formula on one of the table rows . This can sometimes happen when you finish one table of the label and simply copy it to another table (or column). Here are some items to keep in mind in regards to the Visibility formulas:

- 1) Each table (column) has its own visibility formula. This visibility formula is set on each row of the table.
- 2) Don't confuse the table row Visibility property with the Visibility property on other objects, like the table itself or a cell of the table. You want to make sure the ONLY objects that have the Visibility property set are the table rows.
